FAX2MAIL
IP FAXING SERVICE

Fax2Mail allows users to send, receive, save, forward and track electronic faxes in seconds – right from their desktops. Documents no longer sit on the fax machine for everyone to see, and you'll never experience the frustration of missing another important document because the fax number is busy.

Fax2Mail allows you to turn your desktop into a document handling center for all inbound faxes. Tracking inbound and outbound faxes can be next to impossible with traditional fax machines. However, Fax2Mail gives you complete control of all your e-fax and email documents.

ADVANTAGES OF FAX2MAIL

- No additional hardware or software required
- Send, receive, store and print time-sensitive documents from your desktop electronically.
- Treat paper documents like electronic files by viewing, printing, forwarding or deleting them.
- Using SSL web interface, you can control user registration, edit account profiles and customize options such as billing and delivery reports.

OUTSOURCING YOUR FAX SERVICES

To reduce costs and minimize support issues, many corporations are choosing hosted solutions. A hosted model eliminates the need to purchase costly hardware or software licenses, or maintain an aging system.

FEATURES

- System compatibility, integration and development
